presenting a unique perspective on state of the art physical gels this interdisciplinary guide provides a complete critical analysis of the field and highlights recent developments it shows the interconnections between the key aspects of gels from molecules and structure through to rheological and functional properties with each chapter focusing on a different class of gel there is also a final chapter covering innovative systems and applications providing the information needed to understand current and future practical applications of gels in the pharmaceutical agricultural cosmetic chemical and food industries many research teams are involved in the field of gels including theoreticians experimentalists and chemical engineers but this interdisciplinary book collates and rationalises the many different points of view to provide a clear understanding of these complex systems for researchers and graduate students

the purpose of this collection is to provide a forum to integrate pre clinical and clinical investigations regarding the long term consequences of adolescent exposure to drugs of abuse adolescence is characterized by numerous behavioral and biological changes including substantial neurodevelopment behaviorally adolescents are more likely to engage in risky activities and make impulsive decisions as such the majority of substance use begins in adolescence and an earlier age of onset of use 15 yr is strongly associated with the risk for developing a substance use disorder later in life furthermore adolescent drug use may negatively impact ongoing neurological development which could lead to long term cognitive and emotional deficits a large number of

clinical studies have investigated both the acute and long term effects of adolescent drug use on functional outcomes however the clinical literature contains many conflicting findings and is often hampered by the inability to know if functional differences existed prior to drug use moreover in human populations it is often very difficult to control for the numerous types of drugs doses and combinations used not to mention the many other environmental factors that may influence adult behavior therefore an increase in the number of carefully controlled studies using relevant animal models has the potential to clarify which adolescent experiences particularly what drugs used when have long term negative consequences despite the advantages of animal model systems in clarifying these issues the majority of pre clinical addiction research over the past 50 years has been conducted in adult animals moreover few addiction related studies have investigated the long term neurocognitive consequences of drug exposure at any age in the past 10 years of so however the field of adolescent drug abuse research has burgeoned to date the majority of this research has focused on adolescent alcohol exposure using a variety of animal models the results have given the field important insight into why adolescents are more likely to drink alcohol to excess relative to adults and the danger of adolescent alcohol use e g in leading to a persistence of excessive drinking in adulthood more recently research regarding the effects of adolescent exposure to other drugs of abuse including nicotine cocaine and cannabinoids has expanded therefore we are at unique point in time when emerging results from carefully controlled pre clinical studies can inform the sometimes confusing clinical literature in addition we expect an influx of prospective clinical studies in response to a cross institute initiative at nih known as the abcd grant several institutes are enrolling children prior to adolescence and the initiation of drug use in order to control for pre existing neurobiological and neurobehavioral differences and to monitor the age of initiation and amount of drug used more carefully than is possible using retrospective designs

hydrogels are very important for biomedical applications because they can be chemically manipulated to alter and control the hydrogel s interaction with cells and tissues their flexibility and high water content is similar to that of natural tissue making them extremely suitable for biomaterials applications biomedical hydrogels explores the diverse range and use of hydrogels focusing on processing methods and novel applications in the field of implants and prostheses part one of this book concentrates on

the processing of hydrogels covering hydrogel swelling behaviour superabsorbent cellulose based hydrogels and regulation of novel hydrogel products as well as chapters focusing on the structure and properties of hydrogels and different fabrication technologies part two covers existing and novel applications of hydrogels including chapters on spinal disc and cartilage replacement implants hydrogels for ophthalmic prostheses and hydrogels for wound healing applications the role of hydrogels in imaging implants in situ is also discussed with its distinguished editor and international team of contributors biomedical hydrogels is an excellent reference for biomedical research scientists and engineers in industry and academia as well as others involved in research in this area such as research clinicians examines the diverse range and use of hydrogels focusing on processing methods and novel applications comprehensive book explores the structure and properties of hydrogels and different fabrication technologies covers important areas such as processing of hydrogels covering hydrogel swelling behaviour superabsorbent cellulose based hydrogels and regulation of novel hydrogel products

environmental chemistry in the lab presents a comprehensive approach to modern environmental chemistry laboratory instruction together with a complete experimental experience the laboratory experiments have an introduction for the students to read a pre lab for them to complete before coming to the lab a data sheet to complete during the lab and a post lab which would give them an opportunity to reinforce their understanding of the experiment completed instructor resources include a list of all equipment and supplies needed for 24 students a lab preparation guide an answer key to all pre lab and post lab questions sample data for remote learners and a suggested rubric for grading the labs additional features include tested laboratory exercises with instructor resources for environmental science students environmental calculations industrial regulation and environmental stewardship classroom and remote exercises an excellent user friendly and thought provoking presentation which will appeal to students with little or no science background a qualitative approach to the chemistry behind many of our environmental issues today
