includes section recent book acquisitions varies recent united states publications formerly published separately by the u s army medical library

recent developments have spurred a renewed interest in novel solutions to access the patient circulation mainly concentrating on vascular access for renal replacement therapies and on peritoneal dialysis access starting with the epidemiology the focus then shifts to the evolution

of new techniques and monitoring procedures with regard to hemodialysis which are discussed and evaluated attention is also paid to the new biomaterials available concentrating on their improved biocompatibility and surface characteristics as developments in the field of peritoneal dialysis have taken a similar turn new devices providing access to the peritoneal cavity which have recently been made available are introduced next last but not least the management of complications and the continuous maintenance and care of the access with regard to both hemodialysis and peritoneal dialysis are highlighted this book provides a complete overview of the devices catheters and methods currently available to ensure successful vascular and peritoneal access taking into account both the physiology of the extracorporeal circulation and the mechanisms of peritoneal dialysis with regard to the most adequate access techniques this is a unique resource for clinicians investigators and researchers in the field of renal replacement therapy

this comprehensive reference on the fundamentals of hemodialysis access creation and advanced management for maintenance is designed to meet the needs of all surgeons and physicians responsible for the treatment and care of patients undergoing dialysis the book opens by discussing every aspect of dialysis access planning including selection of the right access for the individual patient and access strategies hemodialysis access techniques from the most basic to the most complex and unconventional are then described step by step and guidance is provided on follow up detailed attention is also devoted to the challenging management of specific complications of dialysis access surgery including failing hemodialysis access the book includes a wealth of informative high quality images and illustrations and the authors are prominent vascular surgeons transplant surgeons general surgeons nephrologists and interventional radiologists from across the united states

vols for 1964 have guides and journal lists

dialysis access a multidisciplinary approach gives radiologists nephrologists and surgeons the complete knowledge base they need to deliver effective coordinated care to dialysis patients with vascular access needs this practical guide explains how to implement the national kidney foundation s dialysis outcomes quality initiative doqi guidelines for vascular access and details procedures for creating vascular access monitoring access failure treating blocked access and inserting and using catheters dr gray is the lead author for the society of cardiovascular

and interventional radiology scvir s dialysis access reporting standards international contributors are expert interventional radiologists nephrologists and vascular access surgeons dialysis access a multidisciplinary approach fully integrates these specialties perspectives

this book describes the current status of vascular access for patients with end stage renal failure who require dialysis the book highlights controversial areas and problems and describes differences in practice in usa and europe vascular access is the achilles heel of dialysis in the united states and europe in 1999 there were in access of 400 000 patients maintained on dialysis the success of this life sustaining procedure is dependant on being able to successfully access the circulation and obtain blood flows of between two and five hundred mls per minute three times a week in 1964 cimino and brescia described what remains today the premier form of vascular access not long after the development of the cimino brescia fistula it became apparent that there were patients in whom it was either impossible or extremely difficult to create an adequate fistula for dialysis as dialysis technology has been applied to older and sicker patients this trend has continued such that in the united states the majority of patients starting dialysis do not have a primary fistula the maintenance of long term vascular access in patients who do not have a primary fistula requires considerably increased effort in recent years a number of innovations have considerably increased the success of long term vascular access in these patients this book brings together these developments including strategies to prospectively detect impending vascular access failure and strategies to pre emptively prevent graft failure simultaneously with these developments there have been dramatic improvements in our understanding of the pathophysiology of graft failure this improved understanding of the biology of access failure are beginning to bring to the clinical arena newer strategies to delay graft failure

when the external quinton scribner arteriovenous shunt was developed in 1960 and a little later the internal brescia cimino arteriovenous fistula was developed as a vascular access for hemodialysis thereby making possible regular dialysis therapy of chronic uremic patients many nephrologists became surgeons having learned the type of vascular surgery related to hemodialysis quite well the same series of events occurred with regards to peritoneal dialysis with the introduction of the tenckhoff catheter and the need for gaining a permanent access to the peritoneum for chronic ambulatory peritoneal dialysis capd therapy with time however problems relating to vascular and peritoneal access have forced many nephrologists to give up their surgery meanwhile many surgeons have become quite expert in some sophisticated

techniques relating to dialysis e.g vessel grafting prosthesis implantation etc today whether or not involved in this type of surgery both nephrologists and surgeons remain interested in knowing all available access devices for dialysis as well as the surgical techniques involved however all nephrologists involved in dialysis must know how to prevent or treat complications related to dialysis access thus it appeared to me to be quite advisable to have a book in my series topics in renal medicine dealing with vascular and peritoneal access for dialysis

as the dialysis population grows an expert medical resource on the percutaneous creation and maintenance of vascular access is much needed this book fulfills exactly that need engaging interventional radiologists vascular surgeons interventional nephrologists and the medical support personnel serving these patients providing a clear understanding of best techniques and practices the authors present an unbiased discussion of patient preparation procedures and new devices and equipment logically organized and concluding with a compelling collection of 15 noteworthy cases the book is the culminating work of leading experts in their specialties the first truly practical reference dedicated to this topic essentials of percutaneous dialysis interventions extends across multiple medical specialties to address a global health problem easy to use reader friendly and portable experienced practitioners and trainees alike will find this book to be of daily value

moving beyond the science of hemodialysis access this collection of clinical cases covers procedural and practical aspects of arteriovenous fistula arteriovenous graft dialysis catheter draining veins central veins arterial interventions and hand ischemia world experts in the disciplines of interventional nephrology interventional radiology and surgery offer creative visions of their practice and provide insights on topics from

routine access creation to advanced novel techniques dialysis access cases presents solutions to problems encountered in practice while capturing the art of this medical discipline and challenging procedure
